

EnSafe acquires Tampa-based Progressive Engineering & Construction

January 10, 2022

We are pleased to announce that Tampa-based Progressive Engineering & Construction, Inc. (PEC) is now part of EnSafe Inc. PEC's cofounder Bridget Morello, PE, has joined EnSafe as an Associate Principal to augment EnSafe's strong Senior Leadership Team and to guide and direct remediation efforts nationwide.

PEC's engineers and scientists bring significant experience in remediation, plant operations, and waste minimization projects for industrial, municipal, and other clients, including sites regulated under CERCLA, RCRA, state/local orders, and various remediation programs.

"While PEC's reputation and 'client first' mentality align well with EnSafe, the crux of why we're most excited is PEC's people, whose hearts and minds are our most valuable assets," says EnSafe President and CEO Don Bradford, CHMM. "It's clear each of PEC's staff know how to build and retain client loyalty, and each is an accomplished standout with environmental consulting acumen."

"Our combined resources will dramatically expand our geographic reach and our service offerings going forward," says new EnSafe Associate Principal Bridget Morello, PE. "I look forward to serving on EnSafe's Senior Leadership Team and will ensure that our stellar service history continues."
