

ICF Acquired Eco-Tech Consultants

January 12, 2021

We're excited to announce that we've added a new layer of scientific expertise to our natural resources services team. A handful of field-based, technical experts and senior biologists specifically trained in the exploration and analysis of taxonomic (or organisms) groups, joined ICF earlier this month.

With this addition, we have expanded our field survey capabilities of rare and sensitive aquatic and terrestrial species—including bats and other small mammals, freshwater mussels, fish, and plants—in the eastern U.S. Passionate about natural resource management, our newest team members join our deep bench of 1,000+ environmental science, policy, and technical experts.

Coming to us from Eco-Tech, an ecological consulting firm based in Kentucky, the team has been supporting clients for 30+ years with obtaining the environmental documentation required for the construction and maintenance of roadways, rail lines, airports, and other supporting infrastructure. They bring a trusted reputation in the eastern U.S. that complements our strong relationships with federal and state regulatory agencies.
