

Acquisition of Landtech Civil Engineering and Construction Engineering & Inspection Practices Furthers KCI Expansion in Texas

February 27, 2020

KCI has acquired the civil engineering and construction engineering & inspection (CE&I) practices of Landtech Inc., a consulting firm with offices in Texas. Landtech works with state and municipal clients to provide professional services to expand and maintain the growing infrastructure needs throughout the state.

Landtech was founded in 1985 in Houston. As the firm's engineering and CE&I practices expanded, its geographic reach spread across the state, and now also includes offices in Mission and San Antonio. Landtech has worked with a diverse client base including the Texas Department of Transportation, the city of Houston, and Harris, Hidalgo and Fort Bend counties.

The engineering and CE&I practices work on infrastructure projects at both the state and municipal levels. Current and recently completed work include Sam Houston Tollway East, US 380, US 281, FM 2920, US 377, grade separation of SH 302 at SH 115, and reconstruction of Bryan Road.

"Merging with KCI will allow us to better serve our existing client base with additional resource areas such as subsurface utility engineering, mechanical/electrical engineering, utilities coordination, geospatial analysis and asset management," said Landtech Principal and Vice President Thomas A. Staudt, PE. "At the same time, the acquisition gives our engineering and inspection personnel new opportunities for professional development and growth."

KCI opened its first office in Texas in 2012. With the completion of this acquisition, the firm has now expanded to a team of more than 100 operating out of seven locations in Houston, Dallas, San Antonio, Mission, and Austin. Landtech's civil engineering and CE&I practices will immediately begin operating under the KCI umbrella and name.
