

Alden Joins Round Table Capital Sponsored Platform

September 29, 2021

Alden Research Laboratory, Inc. ("Alden"), the oldest continuously operating hydraulic laboratory in North America, has joined the Round Table Capital ("RTC") sponsored national platform of environmental engineering companies, currently known as NECS Companies. These companies offer complementary capabilities and professional services from across the US, and are focused on the industrial, real estate, energy, technology, water resources, transportation, and government sectors.

Together, the firms that make up this RTC platform offer comprehensive capabilities, including environmental site assessment and remediation, environmental compliance, water resources and treatment, natural resources and ecology, traditional site civil and geotechnical engineering, as well as climate change resiliency including marine and coastal engineering. The combined platform of nearly 450 staff located in offices across the US includes the experts from Hull & Associates, Duffield Associates, HSW Consulting, and Geolnsight.

Alden deepens the expertise offered by this group of like-minded companies.

Alden combines a 127 year history of fluid flow analysis and best in class physical modeling, field measurements and precision flow meter calibrations with innovative, state-of-the-art numeric simulations and computational fluid dynamics (CFD) modeling. We offer extensive national and international experience in studies to support hydroelectric dams, nuclear facilities, process engineering, as well as coastal and riverine modeling. In addition, Alden's renowned experts help clients with engineering design, permitting, and environmental compliance projects found throughout the United States.

Gerry Salontai, CEO of the platform, explained, "It is immediately clear how the addition of Alden to our platform will bring added value and success to the clients we serve across the US. I share the excitement of all our employees in welcoming Alden's unique and capable leadership and technical professionals to the team."
