

Expanding our civil services in the Midwest

February 16, 2021

RTM Engineering Consultants, a rapidly-growing, national consulting firm offering services in civil, mechanical, electrical, plumbing, and fire protection design is pleased to announce its recent acquisition of J+M Civil Design, a civil engineering firm based in Bettendorf, Iowa, and specializing in infrastructure improvements for the transportation, municipal, and public works sectors.

“Welcoming the J+M Civil Design team to RTM means more than just growing our civil engineering capabilities, but also combining forces with a firm whose culture already resonates with the RTM core values, said RTM CEO Tony Mirchandani. “The J+M Civil team holds a reputation for over serving clients by focusing on their unique needs and schedules, and we are excited to have them as part of our team.”

J+M Civil Design is a seven-year-old firm providing planning, design, regulatory compliance, and construction administration services, bringing a wealth of knowledge and experience in residential, commercial, municipal, educational, transportation, and public works applications. Their portfolio spans a variety of improvement projects from rural and urban roadway construction, to multi-use paths and private land development. Over the years they have built deep relationships with local architects, school districts, and municipalities, striving to provide an individualized and focused experience for each project.

“We have worked with the RTM MEP team on several projects in the past, so we are already familiar with their work ethic and values as a company,” said J+M Civil Design Partner, Bryce Johnson. “We are looking forward to the opportunity to combine our experience and expertise on future projects together.”

“We are impressed by the integrity RTM possesses, along with their passion for providing clients with exceptional engineering services,” said J+M Civil Design Partner, Calisse McPherson. “This merge will allow us to continue our existing relationships with clients, but also grow and develop our team by taking on new and challenging projects across the country.”
