

Expanding our reach on the West Coast and broadening our civil services nationwide

December 1, 2020

RTM Engineering Consultants, a rapidly-growing, national consulting firm offering services in civil, mechanical, electrical, plumbing, and fire protection design is pleased to announce its recent acquisition of RCE Consultants, a civil engineering firm based in Laguna Woods, California, and specializing in water, wastewater, public works, private land development, industrial and water quality sectors.

“We are impressed by the growth that RTM has achieved over the last 39 years and look forward to partnering with them in this next chapter of their development,” said RCE President, Rich Clark. “With our combined resources moving forward, we will be able to take on new and challenging projects, while also growing and developing our team internally.”

Established in 2004, the RCE team brings a creative and unique approach to civil engineering consulting. By asking the important questions upfront regarding added value to investment, enhanced site functionality and sustainable design strategies, the team ensures a balance among the needs of stakeholders, approving agencies, and end users alike. Projects become more than just interpreting local codes, ordinances, regulations, and bureaucratic finagling, but also bringing together communities, united in excitement for the project.

Tony Mirchandani, CEO of RTM Engineering Consultants commented, “The RCE team will not only bring a wealth of knowledge and experience to RTM, but they are a perfect fit culturally. With this new strategic growth move, we will be able to broaden our civil engineering services nationwide as well as expand our presence on the West Coast.”

RCE has a passion for providing excellent service, team communication, a proactive approach, and quality results – all characteristics that directly align with the core values of RTM. RTM is thrilled to welcome the RCE team to its now 175+ design professionals, and look forward to strengthening the MEP/FP and civil engineering services they are able to offer nationwide.
