

SurveyWorks Inc. joins Terradyn Consultants, LLC

January 1, 2022

We are pleased to announce that SurveyWorks Inc. has joined Terradyn Consultants, LLC, a leading engineering, design, and civil consulting firm headquartered in New Gloucester, Maine. Teaming up with Terradyn, we are now able to offer our clients site-design services, stormwater management, road design, post-construction inspections as well as permitting and planning services through all phases of a project. Our team will continue to provide land surveying and land-use planning services at the same high level of care and professionalism that you've come to expect.

SurveyWorks and Terradyn have worked together on projects since 2005 and have increased our collaboration in recent years. By incorporating SurveyWorks as a department of Terradyn, we can leverage more resources and technology to advance our products and efficiencies. SurveyWorks has been rapidly growing our professional and technical staff and now has three field crews, a dedicated survey CAD drafter and two licensed Professional Land Surveyors. Joining Terradyn provides our staff with access to benefits, more advanced equipment with higher accuracy and quicker data collection & data processing, as well as the opportunity to work on new and rewarding projects.

Terradyn is a highly respected Civil Design firm focused on providing efficient, cost-effective and timely engineering services throughout Southern, Central, and Coastal Maine. Projects include the Maine Beer Company expansion in Freeport, the redevelopment of the former Notre Dame de Lourdes Church in Saco, Master Planning and design at Thornton Academy, and numerous municipal and residential improvement projects. We expect our portfolio to continue to grow as we transition our teams together.
