

Ulteig Acquires NLS Engineering, Expanding Into Canada

May 4, 2021

Ulteig, a leading provider of comprehensive engineering/design, program management, technical services and field services, has acquired NLS Engineering, a Hamilton, Ontario engineering firm specializing in utility-scale solar, battery storage, water and wastewater. The acquisition also includes NextDAS, the versatile monitoring system designed for wind, solar and battery storage systems.

“This acquisition enhances and strengthens Ulteig’s capabilities across the U.S. border into Canada and expands our existing business lines, including system integration and SCADA,” said Ulteig President and CEO Doug Jaeger. “NLS Engineering is one of the fastest-growing SCADA vendors in the solar industry and one of the most experienced integrators in the North American energy and water sectors,” Jaeger said.

The two companies know each other well as partners on projects in the energy markets. Both companies share a proven track record for exceptional quality of services, work ethic, client management and company culture.
