

J.S. Held Expands Forensic Engineering & Accident Reconstruction Services in Canada with the Acquisition of Kodsi Forensic Engineering

July 21, 2022

This acquisition supports the expansion of J.S. Held's Accident Reconstruction Practice and the firm's strategic growth throughout Canada.

J.S. Held, a specialized, global consulting firm, announced today that it has acquired Kodsi Forensic Engineering (Kodsi), a forensic engineering firm based in Ontario that specializes in accident reconstruction services. This acquisition supports the expansion of J.S. Held's Accident Reconstruction Practice and the firm's strategic growth throughout Canada.

Kodsi professionals have been retained to advise in matters related to motor vehicle collisions; personal injury cases involving slips, trips, and falls; and property claims. Their expertise spans eight distinct engineering and scientific disciplines, including civil, mechanical, biomechanical, kinesiology, human factors, physics, materials, and technology.

"The Kodsi team is highly respected for their forensic engineering services, driver behavior research, crash testing experience, and refined accident reconstruction expertise," said Steve Fenton, P.E., Accident Reconstruction Practice Lead for J.S. Held. "We are excited to welcome the experts from Kodsi Forensic Engineering to our team and further expand our accident reconstruction services across North America."

With experience gained through more than 20,000 investigations, over 100 crash tests, an internally-developed application named "Reconstructionator™", dozens of relevant peer-reviewed research publications, and over 200 court testimonies, Kodsi experts provide clients with objective investigation services and litigation support. Their clients include the automotive, construction, industrial, insurance, law enforcement, legal, sports entertainment, and environmental sectors.

"Our team is excited to become part of J.S. Held and gain additional resources and expertise to better serve our clients," said Sam Kodsi, President and Principal Engineer of Kodsi Forensic Engineering. "We look forward to our future collaboration as both of our firms share foundational values focused on quality, service, team culture, and enriching our industry through education and continuing research."
