

## **IMEG Corp. expands in Ohio and grows to more than 2,000 team members**

*September 29, 2022*

IMEG Corp. has acquired the engineering division of Veregy, formerly Dynamix Engineering, in Columbus, Ohio.

The firm launched in Columbus in 1997 as a full-service mechanical, electrical, plumbing, fire protection, and technology engineering firm focusing on design engineering and systems assessments. The team specializes in consulting engineering services for building and infrastructure systems in the healthcare, education, government, transportation, commercial, recreation and sports markets, among others.

“We are excited to add to our existing Ohio-based teams and deepen our bench of expertise in the region,” said IMEG President/CEO Paul VanDuyne. “We already have an existing working relationship with the Columbus team and their diverse client base is a testament to their technical skills and client-centric focus – two vital characteristics that match IMEG’s own priorities.”

Lee Anne Dye, team leader, said her team is looking forward to being part of IMEG’s growing national presence and breadth of disciplines. “This merger builds on our long-time project partnership history and allows us to bring even more value to our clients,” she added.

The team joined IMEG Sept. 29 and is now doing business as IMEG Corp., continuing to operate out of its existing location with the same team and leadership continuity.

This acquisition creates IMEG’s 72nd U.S. location and grows the firm to more than 2,000 team members, including 100 in Ohio.
