

## Montrose Environmental Group Acquires Frontier Analytical Laboratories

*January 6, 2023*

Montrose Environmental Group, Inc. (“Montrose” or “the Company”) (NYSE: MEG) today announced the acquisition of Frontier Analytical Laboratories (“Frontier”), an environmental laboratory specializing in high-resolution gas chromatography mass spectrometry analysis of Dioxins/Furans, Polychlorinated Biphenyls (PCBs), and other Persistent Organic Pollutants (POPs). Frontier’s leadership, including Vice Presidents Bradley Silverbush and Tom Crabtree, will join Montrose. The business will be integrated into the Company’s Measurement and Analysis Segment and operate as part of Enthalpy Analytical, LLC (“Enthalpy”), a subsidiary of Montrose. Terms of the transaction were not disclosed.

Frontier, formed in 2001, is comprised of a group of elite chemists/analysts who offer more than 80 years of combined experience in providing mass spectrometry identification and quantification of trace level organic pollutants from a wide array of matrices. Based in El Dorado Hills, Calif., the Frontier team will now begin working out of Montrose’s neighboring Enthalpy laboratory.

“With decades of experience, the Frontier team builds upon and strengthens our environmental laboratory testing business. As environmental regulations are pushed lower and lower, adding a team of chemists and technicians with the ability to measure pollutants at single part per quadrillion (ppq) levels help Enthalpy and Montrose support our clients nationally,” said Bryan Tyler, Senior Vice President of Environmental Laboratories at Enthalpy. “Similar to Enthalpy, Frontier has a rich, decades-long history in analytical chemistry and providing clients with high quality, timely and defensible data with impeccable customer service. We are excited to have this talented team join us in our environmental mission.”

Bradley Silverbush, Laboratory Director and Vice President of Frontier, stated: “We are excited to join the Montrose family and Enthalpy, a group we know well and highly respect. Together we will continue to provide clients high quality, timely, defensible laboratory data with unparalleled customer service. We’ve already begun working alongside many of our new colleagues and are eager to collaborate with them even more as we kick off the New Year.”
