

## MA Announces the Acquisition of GeoTest

*February 22, 2023*

RMA Companies (“RMA”) today announced that it has acquired GeoTest Services, Inc. (“GeoTest”), a leading provider of geotechnical, environmental, materials testing, specialty inspection, and building science services in the Pacific Northwest. Since December 2021, RMA has completed six acquisitions, as it executes an aggressive growth strategy to build a national platform for testing and inspection services. Terms of the transaction were not disclosed.

Founded in 1993, GeoTest serves public and private customers across commercial, municipal, industrial and the petrochemical end-markets. GeoTest serves customers from design throughout construction completion through a comprehensive suite of services. Its team of professional engineers, geologists, and special inspectors operate from three offices in Washington, including two highly accredited laboratory facilities. Kevin Richardson and Jeremy Wolf will continue to lead GeoTest, reporting into Steve Griffith, Regional Vice President at RMA.

“The addition of GeoTest supports our strategic expansion in the Pacific Northwest, following our prior acquisition of Northwest Geotech in Oregon,” said Ed Lyon, CEO of RMA. “GeoTest’s leadership in building envelope and fenestration testing services, expertise in the petrochemical end-market, and advanced lab capabilities enables significant cross-sell opportunities across the RMA companies. We are excited to welcome Kevin, Jeremy, and the rest of the GeoTest team.”

“We are thrilled to join the RMA family,” said Kevin Richardson. “We have served municipalities, public agencies, engineering and construction firms in Washington for nearly three decades. Over this time, we have built a reputation of providing high-quality that can meet our customers’ needs during all stages of the construction lifecycle. Our mission facilitating the development and success of our local communities, employees, and industry. We look forward to continuing this work under RMA.”

“Joining RMA allows us to better serve our clients with a broader portfolio of services across a larger geographic footprint,” said Jeremy Wolf. “With new access to an expanded suite of capabilities, we anticipate opportunities to collaborate with RMA’s experts across several engineering and materials science disciplines. This was made possible by the hard work and dedication of GeoTest’s team. I am excited by the professional growth opportunities this transaction enables for our combined workforce.”
