

SkySkopes' Acquisition of LaSen Inc. Elevates Both Company's Footprint in the Energy Industry

March 7, 2023

SkySkopes Holdings, the ownership group of SkySkopes, Inc: an aviation and geospatial company, has acquired LaSen, Inc: a leading aerial leak detection company for oil and gas pipelines. This addition strengthens both SkySkopes and LaSen's operational capabilities, positioning them to deliver more value to the customers they serve.

The acquisition is a strategic move for SkySkopes Holdings as it expands its capabilities in providing high-quality, accurate data collection and geospatial solutions for its customer base.

"We've been leveraging LaSen's technology within our helicopter services for a number of years and have achieved great success together," said Cory Vinger, President of SkySkopes. "Now we'll have the opportunity to bring LaSen's technology, expertise and 20-year reputation into our family."

LaSen's ALPIS (Airborne LiDAR Pipeline Inspection System) is recognized as a breakthrough development in aerial leak detection by the Oil and Gas industry. SkySkopes success in Electric and Utility inspections will enable both companies to complement each other in providing the best solutions for customers.

"The LaSen team is very enthusiastic about blending our vision and talent with SkySkopes," said LaSen President, Tim Goolsby. "Our corporate synergy will no doubt propel us to new heights of innovation while benefitting from the performance and safety of our customers as well as the public who depend on us."

The combined strengths and experience will bring forth immediate value for both companies. Leveraging both companies' unique skill sets and world-class equipment in the marketplace will have a direct benefit to customers by providing additional capabilities and skillsets.
