

Anser Advisory Acquires Digital Twin Leader Gafcon Digital

May 22, 2023

Anser Advisory, the 14th largest program management firm according to ENR, the second fastest growing AE firm according to Zweig Group, and an Energage Top Workplaces USA organization, is pleased to announce its acquisition of Gafcon Digital, the world's leading software-agnostic systems digital model integrator for building and infrastructure owners. The combination of Anser Advisory's broad suite of core competencies and Gafcon Digital's digital twin solutions delivers the benefits of digitalization throughout the entire building lifecycle to owners of critical infrastructure assets and projects.

"This is an exciting addition to the Anser Advisory organization that adds new expertise in the planning, configuration, and implementation of digital twins," noted Bryan Carruthers, Anser Advisory Chief Executive Officer. "The Gafcon Digital team is a cross-disciplined lineup of specialists who successfully integrate processes, people, and technologies. They focus on creating a digital thread from planning to construction and operations of built assets from an owner's perspective and meeting the owner's designated use case, whether creating BIM standards or minimizing the impact of their built assets on the environment. We believe the combination of Anser Advisory and Gafcon Digital will be a game-changing advantage for owners of mission-critical infrastructure and capital programs and projects."

The combined capabilities of Gafcon Digital and Anser Advisory allow clients to fully realize and apply the benefits of the digitalization movement within the fourth industrial revolution. Adding Gafcon Digital directly enhances Anser Advisory's capability to deliver technology as a solution to its core customer markets.

Anser Advisory's Chief Innovation Officer Leigh Valudes said, "Building and infrastructure owners must change how they plan, design, construct, and operate their assets to take full advantage of the newest and most powerful technologies in the market. Many of our clients have found themselves stuck with multiple independent software systems that do not talk to one another. Our combined capability and technology advisory synthesizes all software and hardware inputs into a monolithic living digital model."
