

Bentley Systems Leapfrogs into 3D Geological Modeling with Billion Dollar Acquisition

March 22, 2021

Seequent will help Bentley rule infrastructure with above-ground and below-ground modeling.

A natural fit. Bentley, a leader in modeling infrastructure above the ground, is to acquire Seequent, a leader in belowground modeling.

“By ‘leapfrogging ahead’ with Bentley to align geosciences with infrastructure engineering through deeper digital twins, Seequent underscores our conviction that better understanding of the earth creates a better world for all,” said Shaun Maloney, chief executive officer of Seequent, regarding the recent news of Bentley Systems intention to acquire Seequent.

That’s a powerful statement, especially that last part about creating a better world for all. How on Earth do they plan to do this? Bentley Systems and Seequent, a developer of 3D geological modeling software, are teaming up “to advance environmental resilience by ‘deepening’ infrastructure digital twins.”
