

Lone Tree Engineering Services Joins The KLJ Engineering Team

May 25, 2023

KLJ Engineering LLC (KLJ) is excited to announce the addition of the Lone Tree Engineering Services team to the company, and specifically, to their oil and gas practice. Successful teaming partners for several years, the two firms will now provide increased capability and capacity to upstream and midstream clients throughout the Rocky Mountain region, Midwest, and Southwestern United States.

Together, the firms bring decades of experience and expertise in services related to the oil and gas industry, specifically upstream and midstream facility designs, pipeline designs, well pad and road designs, survey, environmental, and right-of-way services. The addition of the Lone Tree Engineering Team creates the opportunity to provide enhanced services in the upstream and midstream sectors within Oil & Gas.

“Our alignment with Lone Tree reflects the passion both firms have for supporting oil and gas clients and our communities with innovative and accurate solutions for projects of all sizes and complexity,” said KLJ Engineering, Chief Executive Officer (CEO), Eric Michel. “When two companies share so many of the same values and attributes, the decision to combine forces becomes easy.”

With the addition of the Lone Tree team, KLJ will have nearly 45 employee-owners in Colorado and look to bring their expertise to multiple new areas. “We look forward to expanding the resources and expertise we have brought to our clients over the years with the additional resources of KLJ. Our teams have worked together successfully for a few years now and we are excited about this more formal relationship,” said Bill McConaghie, President and Principal at Lone Tree. “This is a great opportunity for everyone including our current and future clients.”

Operating in multiple basins across the United States, Lone Tree Engineering Services specializes in engineering, design, project management, and procurement services in the oil and gas, refining, and process industries.
