

## **Fidelity Energy & Sustainability Expands into New England with Key Acquisition**

*July 12, 2023*

Fidelity Building Services Group (Fidelity BSG) announced today the acquisition of Environmental Systems Corporation (ESC) as part of the strategic expansion of Fidelity Energy & Sustainability, a national team of professionals dedicated to the transformation of buildings into energy-efficient, sustainable, and healthy environments.

Headquartered in West Hartford, Conn., ESC has built a strong reputation as a trusted service and end-to-end solutions provider for a variety of sophisticated facilities and clients, including commercial, industrial, healthcare, education, government, utilities, and municipalities throughout the Northeastern United States.

"We are very excited to enter this new geography for Fidelity with strong partners that are highly technical industry leaders and who share a culture of service excellence," says Dave Lanphar, CEO/Partner of Fidelity BSG, the parent company of Fidelity Energy & Sustainability. "We enthusiastically welcome this outstanding team to our company."

ESC was founded as a building automation integrator that has grown into a complement of energy solution-based offerings that deliver savings and greenhouse gas reductions to a marquee client roster. The company will join Fidelity BSG as part of its Energy & Sustainability Group and continue to provide transformative solutions and services to its notable clients.

Craig McCurdy, President of ESC, commented, "We knew it was time to find a partner to take our company to the next level. We had no shortage of options but found Fidelity to be by far the best for us. The company's vision, talent, and culture are world-class and can clearly bring us where we want to be."

Fidelity Energy & Sustainability brings pragmatic yet innovative energy-based solutions to customers in commercial, industrial, and institutional markets. Dan Weeden, President of Fidelity Energy & Sustainability, added, "Everything we touch has an energy component to it. We are the company that large energy users look to for optimizing equipment and systems, transforming the way those facilities impact their corporation's bottom lines for financial benefit and sustainability commitments."
