

## Montrose Environmental Group Acquires Expertise in Water Treatment and PFAS Removal in Scandinavia

*August 8, 2023*

Montrose Environmental Group, Inc. ("Montrose" or the "Company") (NYSE: MEG) today announced the acquisition of Vandrensning, experts in water treatment specializing in treating landfill leachate for PFAS and heavy metals in Scandinavia. Founded and headquartered in Denmark, the Vandrensning team will be integrated into Montrose's ECT2 division, a global leader in cutting-edge solutions that mitigate the impact of emerging contaminants in air and water.

The acquisition of Vandrensning marks Montrose's first in Europe, and strengthens ECT2's technical presence in the European water treatment industry, particularly in Scandinavia. Vandrensning today operates in Denmark, Norway and Sweden, and is known for handling complex technical challenges.

Montrose Chief Executive Officer and President, Vijay Manthripragada, commented: "The Vandrensning team strengthens our capabilities and complements our team in northern Europe. Our collective ability to provide a more sustainable water treatment solution resonates well in the markets that we and Vandrensning serve today. We are eager to collaborate and work towards our shared commitment to provide clients with the most advanced and all-encompassing technological solutions for PFAS removal and water treatment."
