

Qualus Acquires Ferreira Power Group Adding to its Grid Modernization, Reliability, and Resiliency Resources

August 14, 2023

Qualus Corporation, a leading power engineering and technical services firm, announced today that it has acquired Ferreira Power Group (FPG), adding to its resources in distribution engineering in support of the grid modernization, reliability, resiliency, and the broader energy transition.

“As we grow Qualus, we are focused on partnering with best-in-class companies that not only add to the technical depth and breadth of our capabilities, but also share our values and focus on culture, people, and clients. FPG checked all those boxes for us,” said Dr. Hisham Mahmoud, Chairman and Chief Executive Officer of Qualus. “Adding FPG’s highly complementary and deep engineering resources and expertise in grid reliability and resiliency to our full range of services will expand our ability to continue to provide robust solutions as we partner with our clients to address the complex challenges associated with grid modernization.”

FPG’s extensive resources and capabilities in distribution planning and design, grid hardening, and program management complement Qualus’ full range of services. The combination will also expand Qualus’ client base and geographic coverage.

“We are very proud of what we have accomplished at Ferreira Power Group and believe that a combination with Qualus will allow us to significantly expand and scale our capabilities to serve our clients while providing growth opportunities for our people,” said Kevin Kruse, FPG’s president. “Our leadership team and people are particularly impressed with Qualus’ culture and its focus on people development through Qualus University — its institutional grade, in-house training organization.” Kevin and FPG’s leadership team will remain with Qualus.
