

Expanding Our Reach on the West Coast

August 2, 2023

RTM Engineering Consultants, a national multi-disciplinary engineering consulting firm has recently merged with Tanner Engineering, an electrical consulting firm based in San Diego, CA.

Founded in 1996, Tanner Engineering specializes in complex electrical engineering design with specific experience in healthcare, alternative energy, and education. Their scope of services include lighting, power distribution, medium voltage, fire alarm, energy retrofits, and arc flash coordination studies. In addition, they have expertise in facility assessments, OSHPD/HCAI – NPC studies, master planning, and innovative design strategies for microgrids and emergency electrical system upgrades. One of their most recent successes is 6 of the first group of microgrid projects ever approved by OSHPD/HCAI and the state of California.

“We have great admiration for the work produced by the RTM team and their well-established reputation within the industry. The merger between our two firms will offer some exciting prospects in undertaking new and challenging projects on a national scale,” said Rocky Tanner, President of Tanner Engineering.

Much like RTM, Tanner Engineering is committed to delivering innovative design solutions for their clients' projects, while also fostering an employee-centric culture of collaboration, respect, and trust. With our core values being so perfectly aligned, this merger will allow us to enhance our capabilities with existing clients; identify new opportunities for our newly combined team of 370+ engineering professionals across the country; and further our commitment to sustainable growth.

“We are thrilled to be welcoming the Tanner Engineering team to RTM, their specialized expertise in the California market is unmatched, and the culture they have built aligns greatly with our own. We can't wait to see what the future holds as we merge our two organizations,” said RTM CEO, Tony Mirchandani.
