

Brooker Engineering joining Weston & Sampson

August 25, 2023

Weston & Sampson (ENR#142), an east coast-based engineering, construction, and operations company is excited to announce that Brooker Engineering, PLLC (Brooker), based approximately 25 miles from New York City in Suffern, NY, has joined our firm. This expansion increases our team's ability to provide clients with structural engineering, site development, infrastructure, municipal planning and zoning, and FEMA flood plain analysis. Together, the firms offer a comprehensive portfolio of services to clients in New York City and along the East Coast. Brooker works on many public and private projects, including structural design services for public and private housing, infrastructure, hydraulics/hydrology, dam design, residential/commercial developments, and construction observation.

"Brooker's culture and approach to client service is a perfect fit with Weston & Sampson and our strategic goals. Joining our two firms together is exciting and allows us to expand our already comprehensive services in many different client sectors," says Frank Ricciardi, Weston & Sampson's CEO. "Our combined team aligns with our Mission to protect, improve and sustain the natural and built environment to enhance the quality of life."

Brian Brooker, the Principal Partner at Brooker Engineering, states that "Brooker Engineering and Weston & Sampson both possess a shared culture centered around outstanding customer service, and their engineering proficiencies mutually enhance one another. Joining forces to become a single team will result in an increased range of services for both current and future clients."
