

IDS Partnership Expands Benesch's Asset Management Capabilities

September 22, 2023

Through a partnership with Infrastructure Data Solutions (IDS), Benesch is exploring new opportunities to deploy innovative asset management solutions and support clients in implementing advanced analytics, modeling and programming capabilities. By utilizing IDS's Asset Optimizer™, an award-winning Asset Investment Planning (AIP) software for the transportation, municipal and utilities sectors, Benesch will be able to more easily provide clients with risk-based cross-asset comparisons and be able to identify and bundle improvements of multiple asset types.

"At Benesch, we are always looking for ways to better serve our clients and communities. With this partnership, I am confident we will be able to level up our client's asset management programs and transform the way they manage infrastructure," said Benesch Environmental Group Manager Stephen Roth. "I'm eager to get started and see what we are able to accomplish for our clients with the support of IDS and their software."
