

Encino Environmental Acquires Lemos Labs to Strengthen Northeastern Operations, Generate Efficiencies and Expand into New Markets

October 11, 2023

Encino Environmental Services (“Encino”) is pleased to announce the acquisition of Lemos Labs, a leading provider of source emissions testing services based in Butler, Pennsylvania. Founded in February 2013, Lemos Labs has solidified its presence in the northeastern US primarily through stack testing and engine testing services.

Benefits of the transaction include:

Local support for northeastern operations and customers: With the addition of Lemos Labs’ established team, facility, and assets, Encino will be better positioned to support its northeastern operations.

Expanded service offerings and markets: This acquisition allows Encino to expand into industrial stack testing, providing a broader service offering and reaching out to new markets beyond the core Oil and Gas sector.

Increased efficiencies: Encino expects to realize cost savings by being able to support current work in the region from its new local facility and bring new capabilities to both existing and potential customers in the region.

Extend stack testing to new markets outside the northeast: Opportunity to extend Lemos Labs’ stack testing expertise across Encino’s market footprint outside the Northeast.

Alex Keffalas, currently General Manager with Lemos Labs, will continue managing daily operations as Operations Director – Northern Region to provide continuity of management and service levels. “I am excited to join Encino, expand the opportunities available to our team and leverage the Encino footprint to grow our current service lines,” said Mr. Keffalas.
