

UES Expands Environmental Expertise with Acquisition of InControl Technologies

December 6, 2023

UES, a national leading engineering and consulting company, has acquired InControl Technologies, an environmental consulting firm located in Houston, Texas, with an additional office in Dallas. Founded in 1997, InControl Technologies provides comprehensive environmental consulting and engineering services, and their addition to UES supports the company's expanding focus on environmental services. InControl Technologies' projects include a wide range of environmental site assessments, remediation management, and site closures.

InControl Technologies joins the Texas region of UES, led by Brian Powell, P.E. InControl Technologies' leadership team will continue to operate the day-to-day business. "With their addition, we're thrilled to expand our team of experts able to assist clients with understanding their environmental liabilities, quantifying their financial risks, and creating strategic plans to build sustainably and minimize ecological impact," said Powell, P.E.

"As we plan for the future of UES, we're proud to grow our capabilities to meet the demand for environmentally sustainable development," said UES CEO Dave Witsken. "InControl Technologies' expertise in environmental services even further enhances our ability to provide environmentally sound solutions that benefit our clients and our communities."

InControl Technologies Founder and Senior Principal Michael Marcon shared, "After 27 years, InControl is starting a new and exciting chapter becoming a part of UES. From our first introduction to the UES team, I knew it was the right fit for us, culturally and ideologically. The InControl team is excited to partner with and expand UES' team of environmental experts. We look forward to sharing best practices, staying at the cutting-edge of technological developments, and increasing the services offered to our existing client base. This will be a win-win for both InControl and UES."
