

LJB Acquires Bridge & Stream Engineering

January 8, 2024

LJB is excited to announce its acquisition of Bridge & Stream Engineering Inc., a leading provider of water resources engineering solutions for the nation's largest railroad companies.

Founded in 2005, Bridge & Stream is known for utilizing leading technology to identify dependable solutions for flooding and drainage issues. Its team members are experts in two-dimensional (2D) hydraulic analyses, which are used to accurately identify design discharges and properly size drainage structures. The firm provides study, design, and permitting services specialized for the railroad industry. Bridge & Stream's current clients will work with the same team they know and trust, while also having access to support from LJB's staff located in offices throughout the country.

Bert Wycoff, PE, CFM, owner and president of Bridge & Stream, said, "I'm extremely proud of what my team has accomplished during the past 19 years, and I know our partnership with LJB will allow us to continue executing our growth initiatives. Our clients will benefit from deeper and more diverse service offerings, and our team will enjoy enhanced support and heightened career development opportunities."

Rod Sommer, CEO of LJB, said, "Bridge & Stream's services align perfectly with our current Water/ Civil team, and their national railroad consulting experience and geographic diversity help us immediately expand that practice. Bert has assembled an incredible group of professionals who we are excited to welcome onto the growing LJB team."
