

TLC Engineering Solutions, Inc. Acquires APG's Engineering Division

April 17, 2024

TLC Engineering Solutions, Inc. and APG Electric, Inc. are thrilled to announce that APG Engineering has joined the TLC team, expanding its presence and capabilities in the State of Florida and broadening its bench nationally. APG's established offices in Sarasota and Clearwater, Florida will transition to TLC locations and integrate with the local, existing TLC teams.

APG's engineering expertise has grown over the past 17 years to include mechanical, electrical, plumbing, fire protection, and telecommunication systems. Working alongside the APG contracting team, they are pragmatic and solution-minded engineers. The APG engineers will continue to support their current clients and projects, with support and expanded services available from TLC resources. Their extensive healthcare portfolio will also significantly enhance TLC's capability to serve its healthcare clientele. In addition to healthcare, APG will reinforce other TLC core markets to include education, aviation, municipal, commercial, cultural, sports & entertainment, and mission critical.

TLC's Chief Executive Officer Michael P. Sheerin explained, "We are grateful to APG Electric for creating this astounding team and for their partnership in supporting this transition. We extend a warm welcome to the esteemed APG engineering team. Their expertise and dedication align wholeheartedly with our mission of service. We are thrilled to offer a deeper bench of talented engineers for clients in the Tampa Bay region and Southwest Florida, especially with their healthcare expertise. Together, we will create innovative solutions that positively impact our clients and the local communities."

Michael Henley, President of APG Electric Contractors and Engineers stated "We are happy for our engineering group and will miss them deeply. We like this partnership because we want the best for our employees. TLC is able to provide greater opportunities for our engineering group that we were limited in doing. Our roots are electrical contracting / technology / life safety systems installation and service, with engineering to support our 'can do' attitude for every client. We will also continue to have VDC (virtual design and construction) BIM resources to support our thriving construction business. We will reset to those roots as we move forward."

Michael Dobbs, former Vice President of APG Engineering, added, "The chance to become part of TLC enables us to better serve our clients and achieve heightened growth in our local branches and beyond. With TLC's support, our staff will have access to industry experts and diverse opportunities for development and advancement."
