

InSite Engineering, LLC Announces Strategic Investment from Godspeed Capital

February 03, 2025

InSite Engineering, LLC (“InSite” or the “Company”), a leading water and wastewater engineering and design services firm specializing in wastewater systems, environmental remediation, municipal and transportation projects, and civil engineering, today announced that it has received a strategic investment from Godspeed Capital Management LP (“Godspeed Capital”), a lower middle-market Architecture, Engineering, Consulting, and Government services, solutions, and technology-focused private equity firm. The financial terms of the transaction were not disclosed.

Through this investment, Godspeed Capital will partner with InSite’s leadership team to establish the Company as the platform brand of a new water and wastewater engineering services provider focused on critical infrastructure projects in the Southeastern United States. As Godspeed’s newest platform brand, InSite will continue to leverage its nearly two decades of expertise to serve its municipal, state and local government, utility, and commercial clients with a comprehensive suite of engineering and design services addressing complex infrastructure challenges.

Founded in 2005 and headquartered in Hoover, Alabama, InSite has established itself as a leading infrastructure engineering firm serving municipalities and government clients throughout the Southeastern United States. Over its history, InSite has built a strong reputation as a trusted, well-respected partner with deep subject matter expertise, a proven set of high-end capabilities, and a talented team of over 40 highly skilled professionals.

The infrastructure sector is experiencing heightened demand for upgrades and expansions driven by aging assets, population growth in the Southeastern U.S., and evolving environmental regulations – including those related to PFAS remediation – all of which are supported by significant federal, state, and local funding initiatives. InSite maintains a robust pipeline of contracted projects, with a strong history of delivering critical water and wastewater treatment facilities, municipal infrastructure improvements, and civil engineering projects. InSite consistently wins new business, alongside recurring streams of revenue from repeat customers across Alabama and Georgia, with additional near-term opportunities in Florida, South Carolina, and Mississippi.

Godspeed Capital will leverage its extensive experience in the engineering, consulting, and government services sectors and significant platform development capabilities to drive InSite’s continued growth. InSite marks Godspeed Capital’s 36th investment since the firm’s inception in 2021. Through its proven buy-and-build strategy, Godspeed Capital has to date established nine platform businesses focused on engineering, consulting, and government services, each with unique areas of focus operating at the intersection of the public and private sectors.
