

## Infrasense Acquires Advanced Bridge Inspections (ABI)

*February 04, 2025*

We are pleased to announce the addition of Advanced Bridge Inspections (ABI) to the Infrasense team. This strategic acquisition will strengthen Infrasense’s ability to deliver cutting-edge concrete condition assessment services throughout the United States, furthering our commitment to providing high-quality, data-driven evaluations.

Founded in 2016 and based in American Fork, Utah, ABI has built a strong reputation for their expertise in developing efficient and accurate nondestructive testing technologies, with a focus on accelerating tried-and-true inspection methods using advancements in automation and data analysis. ABI’s key personnel possess a broad range of knowledge and skillsets in civil, mechanical, electrical, and software engineering. These industry leading experts have helped clients nationwide using their flagship proprietary technologies, including the Rapid Automated Sounding (RAS) and Advanced Deck Imaging (ADI) systems.

“We are very excited to welcome the talented team at ABI to Infrasense,” comments Adam Carmichael, Infrasense’s President. “This acquisition will enhance our capabilities, including the addition of ABI’s proprietary best-in-class RAS and ADI technologies, which aligns with our core mission of continually increasing the value we provide to our clients.”

Infrasense is looking forward to integrating ABI’s expertise into our existing suite of nondestructive evaluation services. The addition of ABI’s Utah office will also allow us to more efficiently serve our existing clients in the western U.S., and, over time, expand our client base and services within the region.
