

## Ehlen Spiess & Haight Structural Engineers Join 19six Architects

*August 3, 2021*

With a shared drive of combining strengths to better serve our clients, 19six Architects is excited to announce that Ehlen Spiess & Haight Structural Engineers (ESHSE) has joined forces with our team. Prior to this union, our roots have long been intertwined beginning with ESHSE's founder Peter Ehlen working within our architectural firm before establishing Peter W. Ehlen & Associates in 1966. From 1966 to present day, 19six Architects and Ehlen Spiess & Haight have worked on a multitude of projects, most notably the Lompoc Aquatic Center, Santa Maria-Bonita School District's New Jimenez Elementary School Campus, The New Vic Theater Renovation, Santa Barbara's Airport Terminal Expansion, and most recently the New Clinicas del Camino Real Medical Office.

"I've worked with the Ehlen Spiess & Haight team for almost 20 years. I've always appreciated their creative, collaborative, problem-solving approach. The ESHSE team has always been an integral part of the 19six team. When the opportunity arose for the two firms to join forces it was a natural, seamless fit. Because the two firms have had such a rich, long-standing history together, when we started kicking around the idea, we could all see very quickly that it was a perfect fit and just made sense to all be under one roof to better serve our clients. I'm extremely excited to add the talents of the ESHSE team to 19six to help integrate the structural engineering even more into our projects."

– Alan Kroeker, President of 19six Architects

Since its inception, ESHSE has participated in the design of educational, healthcare, governmental, commercial, industrial, and historic preservation projects on the Central Coast and across California. As Structural Engineers they have been applauded for their collaboration and expertise. Jeff Haight and Mark Crittenden join 19six as Principal Structural Engineers and bring along with them their talented team.
