

Integral Consulting Expands Service Offerings with Acquisition of Kinnetic Environmental

April 02, 2025

Integral Consulting Inc., a leading environmental, scientific, and engineering consulting firm, is excited to announce the acquisition of Kinnetic Environmental, Inc. (KEI) based in Los Alamitos, California, with offices in California and Alaska. KEI is a recognized leader in performing marine and freshwater sediment and water quality studies and the planning, collection, and evaluation of dredged materials from ports, harbors, estuaries, rivers, lakes, and the open ocean. For many years, Integral and KEI have been trusted partners—the merger of the two firms is a natural progression in the relationship and brings added experience and services to their mutual client base.

"We are excited to have the KEI team join Integral," noted Dr. Craig Jones, Managing Principal for Integral's Marine, Coastal, Climate, and Technology Services. "Their expertise in water quality, data collection, and permitting adds greatly to the services Integral offers. They enhance our ability to expand water and sediment quality assessment and monitoring services, especially vital in a time when regulatory changes increase the importance of expert support services. We look forward to a successful future together as one firm."

Ken Kronschnabl, CEO of KEI, added, "For many years we have worked side-by-side with Integral. We felt this was the right time for our firms to join forces and continue to build a preeminent environmental services firm."
